## **Agenda**

**Intro**

**Devenv Setup**

**Project Setup**

**Design**

**Further Topics**

**Conclusion**

# Intro

## Who are you?

- 0 GW... what?
- 1
- 2 Hello World should be possible
- 3
- 4
- 5 played around with GWT a little
- 6
- 7
- 8 used GWT in projects
- 9
- 10 I am GWT and I'm just here to verify those 3 guys

## What's GWT?

Google Web Toolkit

Compiles Java to JavaScript

- § Enables debugging of Ajax code

- § Use Java tools (Eclipse, JUnit, FindBugs, ...)

Current version: 1.7.1

- § Supports IE 8, Firefox 3.5, Safari 4

- § Using a 1.6 JRE

GWT 2.0 should arrive soon

Apache 2.0 open source license

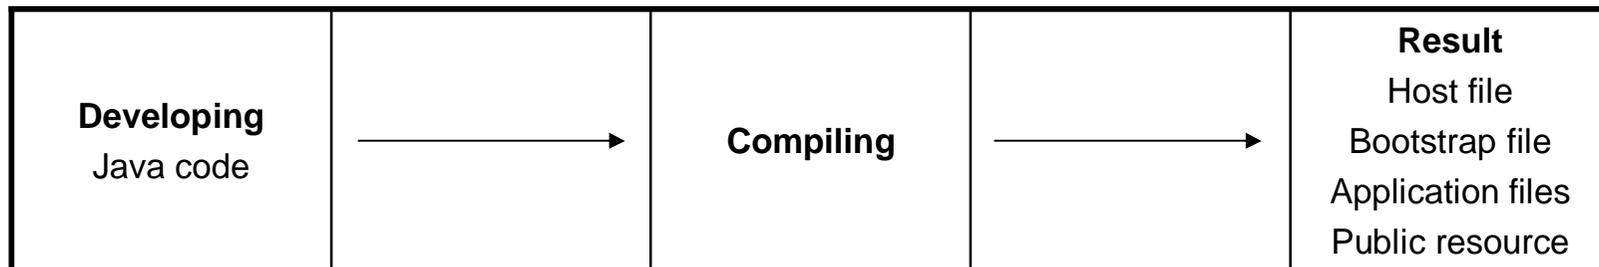

## How does it work?

Write GUI in Java

While developing/debugging everything runs in JVM

After compiling: 100% HTML, CSS, JavaScript

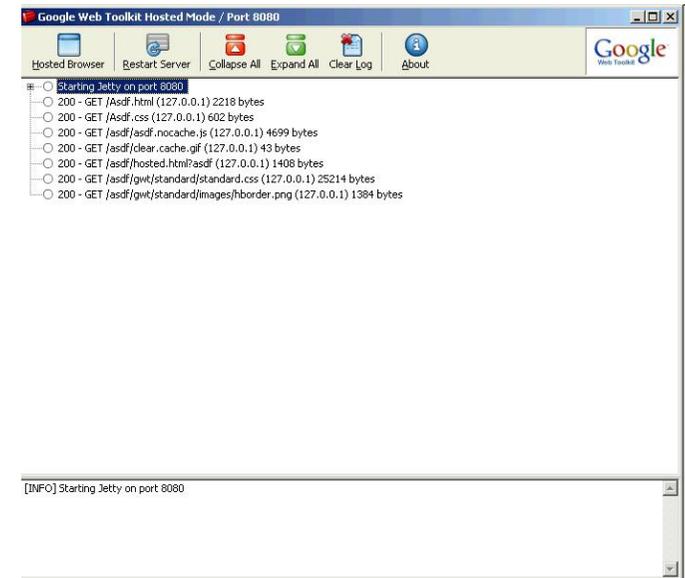

## Hosted mode vs. Web mode

### Hosted mode

- § During development
- § Byte code in JVM
- § Debugging functionality

### Web mode

- § Application compiled into JavaScript, CSS and HTML
- § Has nothing to do with Java any more
- § GWT 2.0: hosted mode in browser and make it work from across the network

## Java code

### Server side

- § As GWT is about the client
  - è no restrictions

### Client side

- § GWT supports a subset of the Java runtime library:
  - § java.lang
  - § java.lang.annotation
  - § java.util
  - § java.io
  - § java.sql
- § <http://code.google.com/webtoolkit/doc/1.6/RefJreEmulation.html>

# Devenv Setup

## Setup

### Without eclipse

- § (install Java SDK)
- § (install Apache Ant)
- § Download and unzip Google Web Toolkit
  - § No installer

### With eclipse

- § (install Java SDK)
- § (install Eclipse)
- § Install Google Plugin for Eclipse  
<http://code.google.com/eclipse/>

## Hello World

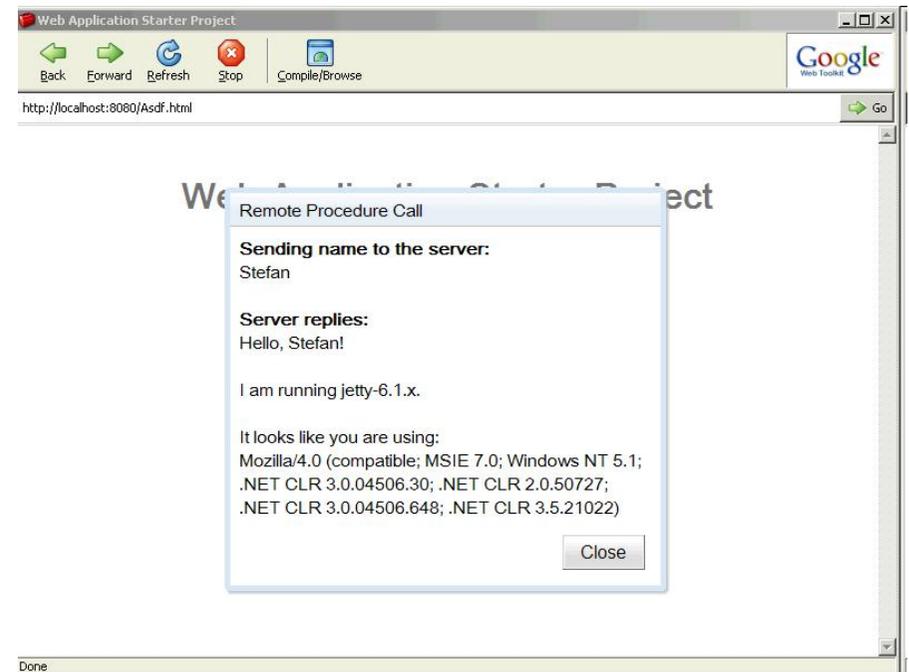

### Without Eclipse

```
§ webAppCreator --out MyApplication  
  ch.netcetera.MyApplication
```

```
§ ant hosted (Hosted mode) or ant build (Web mode)
```

### With Eclipse

```
§ Demo!
```

# Project Setup

## GWT & Maven

GWT works well with Maven2

- But not with m2eclipse-Plugin

gwt-maven-plugin:

- <http://mojo.codehaus.org/gwt-maven-plugin/>

Example pom:

```
<plugin>
  <groupId>org.codehaus.mojo</groupId>
  <artifactId>gwt-maven-plugin</artifactId>
  <configuration><module>ch.netcetera.webis8.extGWTGui</module></configuration>
  <executions><execution>
    <configuration><extraJvmArgs>-Xmx256M -Xss256k</extraJvmArgs></configuration>
    <goals><goal>compile</goal></goals>
  </execution></executions>
</plugin>
```

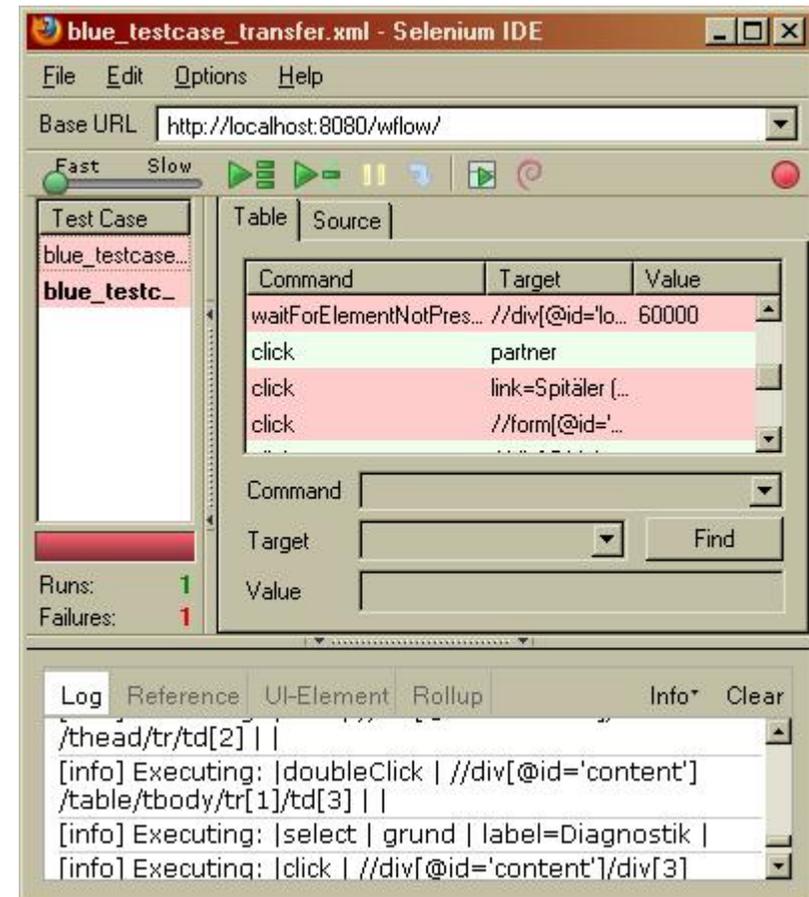

## Testing 1

Server-side: „normal“ JUnit-Tests

Client-side: GWTestCase extends junit.framework.TestCase

Front-end / end-to-end: Selenium

- <http://seleniumhq.org/>

# Demo (partly powered by Selenium)

## Bluecare

**Managed Care Organisation**

**BLUEEVIDENCE**

Praxis 35913

## Testing 2 (Selenium)

### Problems with Selenium

- Async Problem:
  - à Wait until eg. loading.gif disappears
- Problem with click-simulation
  - à Set timeout to .5s and catch Exception
- Change happens
  - à Add IDs to buttons etc.

#### Selenium:

```
<tr>
  <td>waitForElementPresent</td>
  <td>//div[@id='loading']</td>
  <td>60000</td>
</tr>
<tr>
  <td>waitForElementNotPresent</td>
  <td>//div[@id='loading']</td>
  <td>60000</td>
</tr>
```

#### Java version:

```
/** Wait a little for the completion of an
asynchronous call. */
private void waitALittle() {
  try {
    Thread.sleep(500);
  } catch (final InterruptedException e) {
    // nevermind, just continue
  }
}
```

# Continuous Integration

Nothing special here

GWT works well with Hudson (thanks to Maven)

**Hudson** search ?

Hudson » blu » blu-001-8 AUTO-AKTUALISIERUNG EINSCHALTEN

# Design

## Browser-Issues

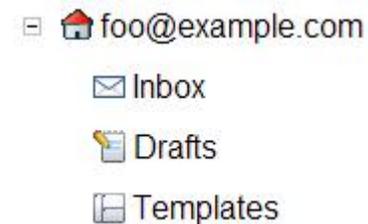

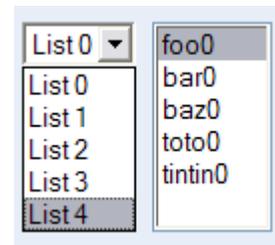

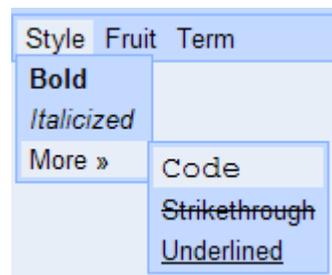

Mostly, it's not GWT,

**It's (browser-specific) CSS**

## Widgets

If you can choose:

# just take official GWT widgets

<http://code.google.com/intl/de/webtoolkit/doc/1.6/RefWidgetGallery.html>

## Corporate Design

If not:

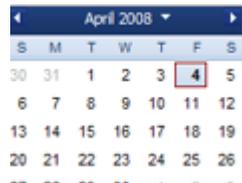

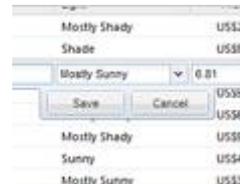

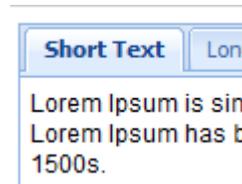

**Look for a capable designer ...**

## Collaboration with designer

**... and let him do the work.**

## External GUI libraries (extgwt,...)

**(Mostly) convenient**

<http://www.extjs.com/products/gxt/>

# Further Topics

# I18n

## Adequate

```
hello=Hello Jugs  
i18n=Internationalization  
sayHelloTo=Hi {0}  
...
```

```
String hello();  
String i18n();  
String sayHelloTo(String name);
```

## Performance

**Depends on you!**

## Security

Be careful:

**Think about evil people**

# Conclusion

## Is GWT ready for the real world?

Netcetera has several projects in production

Has its weaknesses

- Eg. missing libs on client-side

Not beta anymore

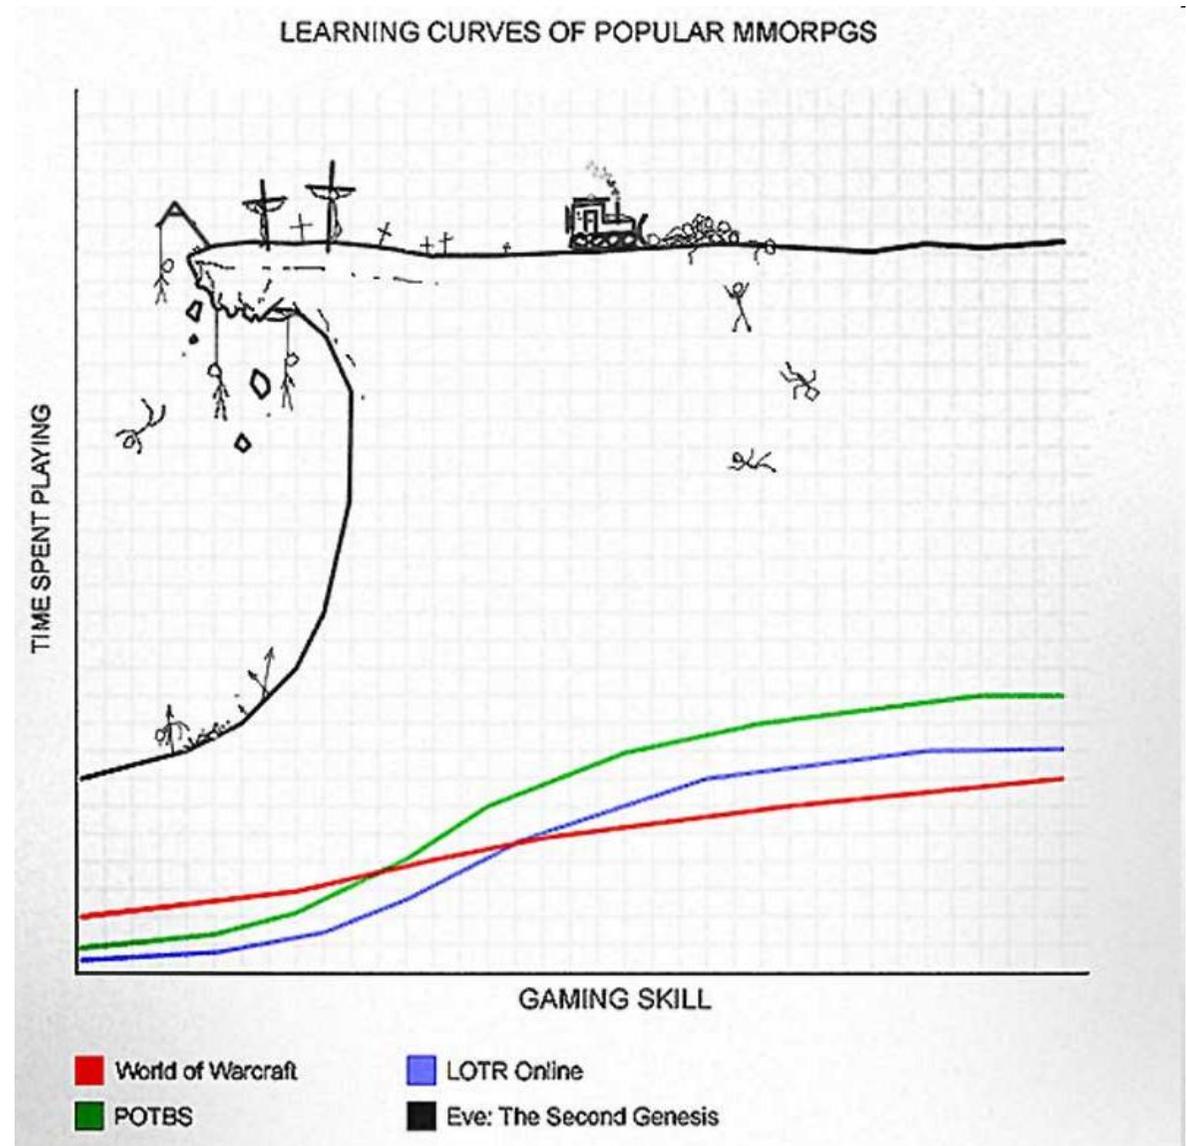

- We started with 1.4.10 - Current version 1.7.1 - 2.0 upcoming

Active community (and Google)

## What's the learning curve?

Steep

- Similar to SWT/AWT
- No JavaScript

## What are the alternatives (for Java-RIA-development)?

### Hand-made AJAX

- Only if very little AJAX needed

### Java Script Frameworks / Libraries

- jQuery / Prototype / YUI etc.

### Other approaches:

- Server-Side Frameworks
  - Vaadin (uses GWT for presentation)
- Stuff that runs in own VM
  - Applets / JavaFX
  - Flex (based on Flash)

## Where can I find more info?

Google:

<http://code.google.com/webtoolkit>

Good forum:

<http://groups.google.com/group/Google-Web-Toolkit>

Get started:

<http://code.google.com/webtoolkit/gettingstarted.html>

Google Plugin:

<http://code.google.com/eclipse/>
